

JUNE IS Cataract Awareness Month

The lens of your eye is not unlike a camera's lens. Any blockage will affect how things are viewed through it. A cataract is a clouding of your eye's lens, which is located behind the pupil and the colored iris, and is ideally transparent. When the cataract stops or blocks light from passing to the retina, your vision may become blurry or dim. Other symptoms can include seeing halos around lights and noticing that colors are not as bright as you're used to. If you are experiencing any of these symptoms, please call us right away!

The Marc Jacobs eyewear collection is characterized by sophisticated and slightly retro shapes, and is distinguished by its exclusive and glamorous style. Marc Jacobs creates a refined image which, along with using high quality materials, gives you the look you've been craving!
