Your First Low Level Light Treatment Mask Session

Experience your first session in our LLLT Mask - expect to be comfortable & relaxed during this intensely bright and warm session of Light Energy safely applied in a precise wavelength and heat level directly to your eyelids and surrounding tissue

Visit 2

- A Comprehensive Review of findings and goals
- Progress Evaluation
- Next Treatment Steps are Considered or Started

Applied Light Therapies: IPL and LLLT

**IPL = INTENSE
PULSED LIGHT**
IPL treatment with our FDA-cleared Epi-C Plus Device is a safe, effective treatment for inflammation of the facial area including the periocular area - the area surrounding the eyes. It has been shown to dissipate inflammatory blood vessels, decrease microbes, and regulate cytokines. Improving ocular surface health by increasing anti-inflammatory chemicals in the area surrounding the eyes and stimulating healthy gland function

LLLT = LOW LEVEL LIGHT THERAPY

Our precise LLLT Devices uses a unique, patented Red and/or Blue mask delivery system as a powerful stand-alone treatment, or as the perfect addition to IPL. LLLT provides a safe, comfortable, effective photobiomodulation therapy for all ages and skin types.

Red Mask Treatments

- Increases ATP production improving cellular metabolism and energy
- Improves cellular function activating transcription factors increasing collagen and fibrogen production
- Normalizes & restores function in glands important to eye comfort and chemistry
- Reduces inflammation

Blue Mask Treatments

- Photodynamic inactivation of bacteria and demodex mites - organisms that contribute to ocular discomfort, rosacea, and blepharitis for many people
- Used as an added treatment in addition to Red Mask therapy when indicated
