

Retinal Exam

In our continued efforts to provide the highest quality eye care, we now require retinal imaging as part of your eye exam today.

This procedure is our new standard of care. Retinal problems such as macular degeneration, glaucoma, retinal holes and detachments, melanomas, cancer and diabetic retinopathy can now be seen ***without dilation*** for most patients.

EARLY DETECTION IS CRUCIAL!

An **optomap**® Retinal Exam provides:

- A complete thorough view of the entire retina is seen quickly and easily. (Fast, painless & no light sensitivity or blurred vision.)
- A scan to confirm a healthy eye or, to detect the presence of disease.
Proactively treating asymptomatic disease can be “sight saving.”
- The opportunity for you to view and discuss the **optomap**® images of your eye with your doctor at the time of your exam.
- A permanent record for your medical file, enabling your doctor to make important comparisons if potential problems show themselves at a future examination.

This image is our new standard of care. This procedure has a co-pay of \$39 annually.
